RHEA JEZER, PhD., SYMPOSIUM DIRECTOR (View Biography)

Welcome to the Nineteenth Annual Symposium on Energy in the 21st Century.

Last year's symposium was a resounding success. We were delighted that we are able to gather to celebrate and look forward to the future. We limited the number present to 150 attendees, but were able to share the day with double that number of attendees online. Those in person social distanced and masked, but were extremely happy to network another. Our extraordinary speakers gave us hope that we can do our part slowing down the devastating effects of climate change. Our speakers were top nationally known policy makers, scientists and professionals doing the cutting edge work, and they shared with us their perspectives and vision for the future. You can listen to the Symposium on the link on this page.

Our world seems to be moving at a staggering pace despite being slowed down by a pandemic. When we met nineteen years ago solar panels were an oddity, now we have not only personal property solar but entire solar farms providing communities with power. Nineteen years ago solar farms were still questioned, and now we are planning for massive offshore wind farms, catching up with other countries. Using hydro, geothermal, hydrogen, biofuel and other sources still being explored might seem unrealistic to

prepared and labor is being trained.

Make sure to add April 21, 2023 to your calendar so you will not miss our Nineteenth Annual Renewable Energy Symposium. If you are not already receiving our newsletter, be sure to contact us. The Energy21 newsletter keeps us all up to date on renewable energy issues around the world, in the U.S. and Northeast, and also provides a listing of grants and job opportunities, and other important events and conferences being held.

Thank you to our devoted sponsors. We could not do what we do without them. Consider becoming a sponsor or renewing for 2023 if you have not already done so. If you are interested in sponsoring, click Sponsors, then click become a Sponsor or contact me.

Stay safe and well! See you in April! *Rhea*

industry professionals to students and interested citizens. Commissioners, mayors, developers, architects, lawyers, engineers, farmers, many college students, all who are interested in the future of renewable energy with the most cutting edge policy being discussed.

See what some our attendees are saying!

I would like to thank you for the excellent content of the Symposium yesterday. It was very informative...

I look forward to next years version. As a Developer/Builder, I fully believe that we have to change the path we are on. I have built a net zero house, and I am completing a Commercial

Building Renovation that I believe will be close to net zero. It will be the first building in Downtown Syracuse to be completely Carbon Free with Solar Panels. The Symposium convinced me to pursue an Energy Storage option. Thank you, and see you next year.
